

# PROFORMA — Infrastructure, DevOps & Shared Tooling Billing

**LIONGATE SARL — Infrastructure Cost Estimation**

**Document:** PROFORMA-05

**Context:** Company-wide shared DevOps / Infrastructure / Engineering tooling

**Hosting Provider:** Hetzner Cloud + SaaS partners

**Currency:** EUR (€)

**Version:** 1.0

## How to read this document:

This proforma covers **cross-project DevOps and engineering infrastructure** — the shared tooling

every LIONGATE engineer uses regardless of which client/internal project they work on.

These costs are **amortised across all projects**, not billed to a single product.

## Scope

This document covers:

- Source control (GitHub)
- CI/CD compute (runners)
- Container registry
- Secrets management
- Observability (logs, metrics, traces, errors)
- Status / uptime monitoring
- Backup orchestration
- Infrastructure-as-Code state
- DNS & domain management
- Developer environments (review apps)
- Engineering communication / docs

It does **not** cover:

- Per-project servers/databases — see PROFORMA-01..04
- Project management — see PROFORMA-06
- Office / non-engineering software

## Reference Stack

| Domain             | Primary Tool                       | Open-source Alternative            |
|--------------------|------------------------------------|------------------------------------|
| Source control     | GitHub Team                        | Gitea self-hosted                  |
| CI/CD              | GitHub Actions (+ self-hosted)     | Drone / Woodpecker                 |
| Container registry | GitHub Container Registry (GHCR)   | Harbor self-hosted                 |
| Secrets            | Doppler Team                       | HashiCorp Vault self-hosted        |
| Logs               | Grafana Loki (self-hosted)         | Logtail / Better Stack             |
| Metrics            | Prometheus + Grafana (self-hosted) | Grafana Cloud                      |
| Tracing            | Tempo (self-hosted) / Sentry       | Honeycomb / Jaeger                 |
| Errors             | Sentry Team                        | GlitchTip self-hosted              |
| Uptime monitoring  | UptimeRobot / Better Stack         | Uptime Kuma self-hosted            |
| Status page        | Atlassian Statuspage / cstate      | Uptime Kuma status page (free)     |
| IaC state          | Terraform Cloud free / S3 backend  | Hetzner Object Storage backend     |
| DNS                | Cloudflare DNS (Free)              | Hetzner DNS (Free)                 |
| Domains            | United Domains                     | —                                  |
| Review apps        | Vercel / Coolify self-hosted       | Hetzner-based per-branch container |
| Comms              | Slack / Discord                    | Mattermost self-hosted             |
| Engineering docs   | Notion / Outline / Docusaurus      | Wiki.js self-hosted                |

# Tier A — Minimum Viable DevOps Stack (Startup / 2–5 engineers)

Maximum reliance on free tiers and bundled services. Suitable for early stage LIONGATE.

| #  | Service                            | Tier / Plan                         | Unit Price     | Qty | Monthly (€) | Annual (€) |
|----|------------------------------------|-------------------------------------|----------------|-----|-------------|------------|
| 1  | GitHub                             | Free + Team for org (€3.67/user/mo) | €3.67/user     | 5   | 18.35       | 220.20     |
| 2  | GitHub Actions minutes             | 2,000 free → likely €0              | Free / overage | —   | 0.00        | 0.00       |
| 3  | GHCR storage                       | Free up to 500 MB private           | Free           | —   | 0.00        | 0.00       |
| 4  | Doppler                            | Developer Free                      | Free           | —   | 0.00        | 0.00       |
| 5  | Sentry                             | Developer Free (5k events/mo)       | Free           | —   | 0.00        | 0.00       |
| 6  | UptimeRobot                        | Free (50 monitors, 5-min checks)    | Free           | —   | 0.00        | 0.00       |

| 8  | Terraform state                    | Hetzner Object Storage backend      | €0.001 per GB  | 1   | 0.10        | 1.20       |
| 9  | Notion                             | Plus, 5 seats                       | €9.50/user     | 5   | 47.50       | 570.00     |
| 10 | Slack                              | Free                                | Free           | —   | 0.00        | 0.00       |
| 11 | Domains @ United Domains           | ~5 domains avg €15/yr each          | €15/yr         | 5   | 6.25        | 75.00      |
| 12 | Backup orchestration node (shared) | CX22 — restic + cron + healthchecks | €4.35          | 1   | 4.35        | 52.20      |

| #  | Service                         | Tier / Plan               | Unit Price | Qty | Monthly (€)   | Annual (€)     |
|----|---------------------------------|---------------------------|------------|-----|---------------|----------------|
| 13 | <a href="#">Healthchecks.io</a> | Hobbyist Free (20 checks) | Free       | —   | 0.00          | 0.00           |
| —  | <b>SUBTOTAL</b>                 |                           |            |     | <b>€76.55</b> | <b>€918.60</b> |

## Tier A — Notes

- Total dominated by per-seat SaaS (GitHub, Notion).
- Self-hosting everything else keeps fixed infra under €5/mo.
- Brittle on observability: replace ASAP once you have  $\geq 3$  production projects.

## Tier B — Recommended DevOps Stack (Growing team, 5–15 engineers)

Self-hosted observability cluster, paid Sentry & Doppler, full CI throughput.

| # | Service                                | Tier / Plan                             | Unit Price  | Qty | Monthly (€) | Annual (€) |
|---|----------------------------------------|-----------------------------------------|-------------|-----|-------------|------------|
| 1 | GitHub Team                            | Per seat                                | €3.67/user  | 12  | 44.04       | 528.48     |

## Tier B — Notes

- Doppler + Notion + Slack drive ~62% of SaaS spend.

- Replacing Doppler with **self-hosted Vault** can save **€180/mo** (€2,160/yr) at the cost of one extra engineer-day per quarter for maintenance.
- Replacing Notion with **Outline self-hosted** can save **€114/mo** (€1,368/yr).
- Self-hosted alternatives reduce Tier B floor to ~**€310/mo**.

## Tier C — Full Engineering Org Stack (15+ engineers, multi-team)

Multiple CI runners, full HA observability, premium SaaS for compliance & speed.

| #  | Service                             | Tier / Plan    | Unit Price  | Qty | Monthly (€) | Annual (€) |
|----|-------------------------------------|----------------|-------------|-----|-------------|------------|
| 1  | GitHub Enterprise                   | Per seat       | €19.25/user | 25  | 481.25      | 5,775.00   |
| 2  | GitHub Actions overage              | 100k min/mo    | €0.008/min  | —   | 240.00      | 2,880.00   |
| 3  | Self-hosted runners pool            | CX42           | €17.77      | 3   | 53.31       | 639.72     |
| 4  | GHCR storage                        | ~50 GB         | €0.23/GB    | —   | 11.50       | 138.00     |
| 5  | Doppler Pro                         | 25 seats       | €36.00/seat | 25  | 900.00      | 10,800.00  |
| 6  | Sentry Business                     | 250k events/mo | €80.00      | 1   | 80.00       | 960.00     |
| 7  | Observability cluster (HA, 2 nodes) | CX42           | €17.77      | 2   | 35.54       | 426.48     |
| 8  | Observability volumes               | 1 TB           | €52.00      | 1   | 52.00       | 624.00     |

| 16 | Domains @ United Domains                 | 20 avg      | €15/yr      | 20  | 25.00            | 300.00            |
| 17 | Backup orchestration node                | CX32        | €8.21       | 1   | 8.21             | 98.52             |
| 18 | <a href="#">Healthchecks.io</a> Business | 250 checks  | €36.00      | 1   | 36.00            | 432.00            |
| 19 | Review apps host                         | CX42        | €17.77      | 1   | 17.77            | 213.24            |
| 20 | PagerDuty                                | 10 seats    | €21.00/user | 10  | 210.00           | 2,520.00          |
| —  | <b>SUBTOTAL</b>                          |             |             |     | <b>€3,131.52</b> | <b>€37,590.24</b> |

## Tier C — Notes

- GitHub Enterprise + Doppler Pro + PagerDuty + Notion are ~70% of total.
- Significant savings possible (~€1,200/mo) by self-hosting Doppler→Vault, Notion→Outline, Sentry→GlitchTip — at the cost of operational burden.
- This tier assumes LIONGATE has at least one dedicated DevOps/Platform engineer.

## DevOps Tier Comparison Dashboard

| Tier | Setup Type                     | Monthly | Annual  | Best for        |
|------|--------------------------------|---------|---------|-----------------|
| A    | Free-tier-heavy, 2–5 engineers | €76.55  | €918.60 | Year-1 LIONGATE |

| Tier | Setup Type                      | Monthly   | Annual     | Best for              |
|------|---------------------------------|-----------|------------|-----------------------|
| B    | Self-hosted obs, 5–15 engineers | €604.54   | €7,254.48  | Year 2–3 growth phase |
| C    | Full org-grade, 15+ engineers   | €3,131.52 | €37,590.24 | Mature multi-team org |

## Per-Engineer Marginal Cost

Useful for forecasting hiring impact:

| Item                              | Per-engineer monthly | Per-engineer annual |
|-----------------------------------|----------------------|---------------------|
| GitHub seat (Team)                | €3.67                | €44.04              |
| GitHub seat (Enterprise)          | €19.25               | €231.00             |
| Doppler Team / Pro seat           | €18.00 / €36.00      | €216 / €432         |
| Notion Team / Business seat       | €9.50 / €14.00       | €114 / €168         |
| Slack Pro / Business+ seat        | €6.75 / €11.75       | €81 / €141          |
| Tailscale Business seat (if used) | €18.00               | €216.00             |
| PagerDuty seat                    | €21.00               | €252.00             |
| Tier B all-in per engineer        | ~€38                 | ~€455               |
| Tier C all-in per engineer        | ~€114                | ~€1,365             |

 Use this table when planning headcount — every new engineer costs ~€455/yr (Tier B) to ~€1,365/yr (Tier C) in DevOps SaaS seats alone.

# Hidden & Variable Costs

| Cost Item                           | Frequency | Estimated Amount | Notes                                 |
|-------------------------------------|-----------|------------------|---------------------------------------|
| GitHub Actions overage              | Monthly   | +€0–€500         | Spikes with new release cadence       |
| Sentry event overage                | Monthly   | +€26–€200        | Per 50k–250k event tier               |
| GHCR/registry storage growth        | Monthly   | +€0.23/GB        | Especially with large Docker images   |
| Cloudflare Workers / R2             | Monthly   | €0–€50           | If edge functions adopted             |
| Vault/Doppler audit log retention   | Monthly   | +€10–€50         | If compliance enabled                 |
| SSO upgrade for SaaS (Notion, etc.) | Monthly   | +€100–€500       | Triggered by enterprise plans         |
| Domain renewal spikes               | Annual    | €100–€500        | When buying many domains for a launch |
| Pen-test of DevOps stack            | Annual    | €1,500–€5,000    | Recommended every 12 months           |

# Budget Planning Summary (DevOps Shared Tooling)

LIONGATE SARL – DevOps & Shared Tooling Budget Reference  
=====

YEAR-1 STARTUP BUDGET:            €76.55            (Tier A – 2–5 engineers)  
GROWTH-STAGE BUDGET:           €604.54          (Tier B – 5–15 engineers)  
ORG-SCALE BUDGET:               €3,131.52        (Tier C – 15+ engineers)

YEAR-1 ANNUAL:                    €918.60  
GROWTH ANNUAL:                   €7,254.48  
ORG ANNUAL:                        €37,590.24

CONTINGENCY BUFFER (+15%, SaaS volatility high):  
Tier A: €918.60        × 1.15 = €1,056.39/yr  
Tier B: €7,254.48    × 1.15 = €8,342.65/yr  
Tier C: €37,590.24 × 1.15 = €43,228.78/yr

ALL-OPEN-SOURCE FLOOR (self-host everything you can):  
Year-1:    ~€35/mo    (~€420/yr)  
Growth:    ~€310/mo   (~€3,720/yr)  
Org:        ~€1,900/mo (~€22,800/yr)

## Decision Guide

| Question                                            | If YES → recommend                      |
|-----------------------------------------------------|-----------------------------------------|
| < 5 engineers, no compliance pressure               | Tier A                                  |
| 5–15 engineers, ≥ 3 production clients              | Tier B                                  |
| Multi-team, on-call rotations, SOC2 or ISO planning | Tier C                                  |
| Want to minimise SaaS lock-in                       | Tier B with self-hosted Vault + Outline |
| Need formal incident management with paging         | Add PagerDuty (any tier)                |
| Strong cost pressure but observability is mandatory | Tier B + self-hosted Grafana stack      |
